Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In Claim 71:

Last line, after "by", replace "the rolling tyre" with – the tyre during rolling --.

Reasons For Allowance

The following is an examiner's statement of reasons for allowance:

The **combination** as claimed wherein a method and system for determining the roughness of a rolling surface of a tyre comprising frequency filtering of the first signal for extracting a second signal representative of motion components of said at least one

point due to the deformations undergone by the tyre during the rolling (claims 52, 71, 97) is not disclosed, suggested, or made obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Hamberger et al. (DE 195 37 257, see English translation) discloses a method for detecting a physical profile of a roadway surface (Abstract). Hamberger et al. discloses the detected rotation speed of the wheel is subjected to high-pass filtering to achieve greater signal strength of the variations in the rotation speed of the wheel due to occurring unevenness of the roadway and to eliminate the part signals which cause changes in speed via external intervention (column 2, lines 15-20). However, Hamberger et al. does not disclose filtering of the detected rotation speed signal for extracting a second signal representative of motion components of said at least one point due to the deformations undergone by the tyre during the rolling.

Masaki et al. (US 4,651,290) discloses a road condition discriminating system (Abstract). However, Masaki et al. does not disclose filtering of a signal for extracting a second signal representative of motion components of said at least one point due to the deformations undergone by the tyre during the rolling.
